

In memory of Carl A. Osborne (1940 - 2017)

Carl A. Osborne was the innovator and the engine behind the Minnesota Urolith Center. In 1978, he declared war on urolithiasis. In 1981, he developed the Minnesota Urolith Center to investigate the causes, cures, and prevention of urolithiasis. The Center's mission is to enhance the quality and quantity of life of all creatures—great and small. We are dedicated to developing noninvasive methods that will consistently and safely prevent and cure diseases of the urinary system. Our Mission encompasses compassionate care by advancing contemporary science.

This month we honor this pioneer and dear friend who devoted his life to helping veterinarians help their patients.
