

Senecavirus A: Case updates

We requested SHMP participants and UMN, ISU, and SDSU diagnostic labs to report frequency of Senecavirus A cases each week.

- 2 VDL Sow cases retrospectively reported for the week of 3/15/17 and 1 Sow case for the week of 3/1/2017
- Note that reported cases between data sources may overlap.

CNS Viruses: VDL Cases

Dr. Paul Sundberg (SHIC) formed a small working group to establish a case definition . Once this is complete, we will re-initiate reporting frequency of detection of these cases
