Morrison Swine Health Monitoring Project – 2017 Summary
Cesar A Corzo, Principal Investigator

- We will remember 2017 for the loss of Dr. Morrison, in honor the program us now named. Dr. Andres Perez led the transition of the program and now Dr. Corzo, the new Leman Chair in Swine health and Productivity is leading the project.
- MSHMP acknowledges and thanks all participants for their willingness to share their data to support the US industry.
- The Swine Health Information Center (SHIC) has been instrumental for the execution of this project.

- Four new participants joined MSHMP increasing the representativeness of the project by adding 64 sow farms accounting for 220,000 sows.
- The weekly report capturing the changes in incidence and prevalence of important pathogens has been shared to participants (n=33) and non-participants (n=185). Now we report on PRRS, PEDv, SVA and novel viruses associated with atypical central nervous system disease.
- The weekly science page featured authors from 18 institutions who explained cutting edge research findings, recent publication summaries, and breakdowns of MSHMP data.

6 peer-reviewed publications were generated because of MSHMP and 3 more are in preparation.

MSHMP is glad to have a diverse and proactive team comprised of faculty, post-docs and grad students from different institutions. We would like to acknowledge such a strong team.

Faculty
R. Morrison
C. Corzo
A. Perez
M. Torremorell
M. Alkamis
K. VanderWaal
J. Alvarez
D. Linhares (ISU)
D. Holtkamp (ISU)
A. Arruda (OSU)
G. Machado (NCSU)

Students, Post-Docs, and Staff
Carles Vilalta
Juan Sanhueza
Emily Geary
Paulo Fioravante
Kaushi Kananke
Pablo Valdes
Gustavo De Sousa Silva
